SS-320SNH-300* CC DRIVER

Model: SS-320SNH-300*

Power: 320W

Rev.: V00

Release date: 2025-09-05

SS-320SNH-300* LED DRIVER

Features

- Efficiency up to 97%
- Isolated dimming: 0-10V, PWM, Resistor
- Optional aux: 12V/0.2A
- Programmable
- Time-controlled
- Dimming off without afterglow
- Standby Power<0.5W
- Protections: SCP/OTP/OVP/UVF
- Compatible with intelligent emergency controls
- Wide output voltage range,DIP-SW Power Range Programmable
- IP65
- Surge protection: CM: 6kV,DM: 6kV
- Long lifetime
- Warranty: 5 years

IP65

Description

SS-320SNH-300* series is 320W round non-isolated constant current LED driver. This series of products have the advantages of isolated dimming function, ultra-high efficiency, compact housing, fully potted, compatible with intelligent emergency control, good heat dissipation and waterproof performance, high reliability, high cost-effective and so on.

Applications:

industrial and mining lights, sports lighting

Model List

Emergency control logical diagram

Technical Specifications for Emergency Lighting Communication Protocol

- (1) Definition of Communication Levels: Active High Level: 4V - 10V (ON); Active Low Level: 0V - 0.3V (OFF).
- (2) Positive Duty Cycle of Communication Signal: 25%.
- (3) Entering Emergency Mode: The emergency driver supply will send a signal with 4Hz and a duty cycle of 25% after entering the emergency state. The LED driver supply must continuously detect this signal four times (signal duration of 30 seconds) before entering the emergency mode.
- (4) Exiting Emergency Mode:
Scenario 1: Upon restoration of AC driver, the emergency driver supply sends a signal with 1Hz and a duty cycle of 25%. The LED driver supply must continuously detect this signal four times to exit the emergency mode.
Scenario 2: If it's timeout in the emergency state, the LED driver supply automatically exits the emergency mode after a default period of 2 hours can be set.

Notes:

In the absence of a detected signal from the sensor (dimming line is a short circuit), the LED driver supply automatically exits the emergency mode after 2 hours. To ensure timely exit from the emergency mode, upon sensor signal detection (releasing the short circuit on the dimming line), the emergency driver supply continues to send the 1Hz exit signal for 2 hours after detecting the restoration of AC driver.

The LED driver supply is equipped with an emergency function switch that can be enabled through our proprietary PC software (default setting is "off"). For obtaining relevant emergency certifications, compatibility with the emergency driver supply system during certification is required.

When the emergency function is used, and the system is operating under AUX power no-load conditions or with the "Dim-off" function enabled, the system should delay switching to battery for 15 seconds after AC power loss.

Ground Resistance	$\leq 0.1\Omega$			25A/1min
Leakage Current	$\leq 0.75\text{mA}$			347Vac

Note:

1. The power supply complies with the relevant EMC standards. The power supply, as part of the terminal equipment system, needs to be combined with the whole system to reconfirm EMC.
2. During voltage withstand test, please short-circuit between L/N, short-circuit between positive/negative output line, and short-circuit between positive/negative dimmer line and auxiliary power supply.

Programming connection diagram

Legacy Timer: Driver's O/P follows the pre-programmed timing curve after turn-on.

Auto-Adjust by Percentage: Driver's O/P will be adjusted by automatically changed dimming curve by the period percentage based on the latest 5 dimming curve.

Auto-Adjust by Mid-point: Driver's O/P will be adjusted by automatically changed dimming curve by mid-point based on the latest 5 dimming curve.

Note:

During the lifetime of the LED lamp, the driver continuously adjusts to increase the output optical power, thus ensuring that the LED lamp still has a constant optical power output after a long period of operation.

Assembly Tips

- 1、 If the product has an external adjustable potentiometer, please adjust the current, it is recommended to use 704 silicone to adjust the current of the Seal the hole of adjusting current with 704 silicone and cover it with waterproof rubber plug.
- 2、 When the dimmer line is not in use, please seal the connector of the dimmer line with insulating sleeve, so as not to string into the interfering signals and cause damage to the dimmer line, affecting the power supply. dimming line damage, affecting the normal operation of the power supply.
- 3, aluminum substrate alignment safety regulations creepage distance > 5mm.
- 4, aluminum substrate LED + and LED - creepage distance > 1.8mm.
- 5, aluminum substrate to minimize the laying of copper area, reduce junction capacitance, reduce leakage current.
- 6, LED lamp bead arrangement is recommended first and then string.
- 7, LED light board insulation level should meet the reliability design requirements.
- 8, other notes, please refer to the “LED driver power supply instruction manual”.

Package

- Outside carton dimension: L×W×H =577mm×385mm×162mm;
- 9PCS/Carton;
- Net weight/Piece: 1.34kg;Gross weight/Carton:13.235kg;
- Please refer to the product name, model number, manufacturer identification, QC PASS, manufacturing date on the package.

Transportation

Packaging is designed suitable for transportation by trucks, vessels and flights. The products should be avoided direct sunlight and rain, loaded/unloaded with caution.

Storage

The product storage meets the standard of the GB 3873 83.
Products should be rechecked if stored for over 1 year before assembly.

RoHS

Products comply with RoHS Directive (2011/65/EU) and amendment 2015/863/EU.
